In-company Training

Introduction to Behavioural Safety

Aim

To equip delegates with the practical and theoretical skills to assess the viability of a behavioural safety programme in their workplace.

Objective

At the end of the programme each delegate will be able to:

- Explain the foundations of behavioural safety
- Explain the human and organisational influences on behaviour
- Analyse work tasks to determine critical behaviours
- Determine whether or not a behavioural safety programme is appropriate for their business
- Apply positive reinforcement techniques for safety behaviour

Content

- Introduction to behavioural safety
- Stages of safety management; technical, procedural, behavioural
- Domino theories (relevance of)
- Rasmussen's model; rule based, knowledge based, skill based errors
- Why people don't follow rules, intentional and unintentional
- Antecedents, behaviour and consequence model
- Implementing a behavioural safety programme
- Observing a task, determining critical behaviours
- Reinforcing safe behaviour as well as eliminating unsafe behaviours
